

NATIVE CALIFORNIA GRASS SOD- A VIABLE ALTERNATIVE

Now **Native** Grass Sod makes sense for many reasons

Land planners, Architects, Agencies, Contractors, Municipalities, and Homeowners throughout California are being asked to do more with less. There is increasing pressure to use “appropriate” landscaping with plants that are native to California and better adapted to our limited rainfall and less dependent on dwindling irrigation supplies.

Delta Bluegrass, located in Stockton, California has recently appointed S&S SEEDS Inc., Carpinteria, CA as a regional Distributor for their complete line of Native California Grass Sod Blends. S&S SEEDS will be serving the entire Central Coast and all of Southern California, offering the very attractive and sensible native grass compositions for a multitude of projects. Both companies are also working together on additional California Native Grass Sod blends for future development.

Delta Bluegrass has pioneered the growth and use of California Native Grass sod for the past 6 years- and has been very successful at growing and supplying 6 different native grass compositions to the Northern California region. S&S SEEDS has developed a reputation for the past 35 years as a native plant specialist- supplying their seeds and knowledge to projects throughout Southern California.

Delta Bluegrass recognized S&S SEEDS as a respected resource for those in Southern California that work with California Native plants, and S&S SEEDS has found Delta Bluegrass’s Native grass Sod Product line to be a high quality, affordable alternative to conventional turfgrass and a good option for increased expediency of Native grass establishment for projects with critical timelines.

Delta Bluegrass’s Native Grass Sod Production fields in Stockton are in close-enough range to cut sod and deliver the very next day to jobsites as far away as San Diego. S&S SEEDS and DeltaBluegrass have already teamed up to supply several project sites with the Native Grass Sod. People are impressed with the look of the native grass sod – but even more impressed when they learn the irrigation requirements will be from 30-50% of “normal” irrigation requirements. Clearly, this Native California Grass sod is doing more with substantially less.
